RE621 Touchpad Range Extender extends the wireless range between Touchpads and the panel.

Features
- Wireless range extension
- Single button enrollment
- 5-year warranty

Associate Range Extender with Panel
The Range Extender must be associated with the panel. Place the Range Extender within two feet of the panel. Press and hold the Range Extender's Factory Default button for three seconds. The WiFi LED should begin to flash quickly, indicating that the Range Extender is scanning for panels. Once the WiFi LED is solid, the Range Extender is connected and can be moved to the desired location. Note: The Connect+ does not need to be in enrollment mode.

Touchpads
When installing a new Touchpad into a system that already has a Range Extender, enroll the Touchpad to the panel by selecting either the panel's SSID or the Range Extender's SSID. Note: The Range Extender's SSID will match the panel's SSID but will end in “-1”. The Touchpad will automatically select the best connection.

If a Touchpad has already been enrolled into the panel, it does NOT need to be re-enrolled into the newly-installed Range Extender. Simply trigger a WiFi re-scan on the Touchpad and watch for whether it connects to the panel or the Range Extender, and whether it improves its signal strength. To trigger a WiFi re-scan, hold down the Touchpad’s gear button until the communication test mode is enabled. Then, press and hold “Re-scan WiFi.”

Use the panel installation guide to verify proper system setup.
Verify the signal strength of the Touchpad is more than 35. Move the Range Extender or Touchpad if the signal strength is too low.

Install by mounting the Range Extender in the desired location using the mounting screw holes. Choose a mounting location within reach of the 10-foot power cable, then connect the power supply to the Range Extender.

Pro Tips

Factory Default the Range Extender by pressing the Factory Default button for 6 seconds.

Use Touchpad firmware version 0.0.13.0 or later.

Avoid mounting near appliances or metal objects.
