

Smart security for your connected life

An Alula Security System keeps pace with your smart, connected home. Turn on or off smart lights, lock or unlock doors, and control all your Z-Wave smart devices right from your phone or touchscreen control interface. Plus, you can create scenes to do things like turn on the lights and unlock the door when the garage door opens.

Rest assured your Alula System fits seamlessly into your connected life with streamlined control of all your Z-Wave devices.

Lightning fast

Unlike other systems that have a common 5-10 second “trigger to response” delay, you won’t wait even a second for your light to turn on or your door to unlock. Our network and device technology is ultrafast providing the best experience in the smart home market.

Automated for your life

Create scenes that trigger events based on another occurrence like turning off the mudroom lights when the front door locks or locking all of your smart locks when your system is armed in the AWAY mode.

Smart light control

Control all your smart lights from your phone or system touchscreens.

Connected thermostats

Know and adjust your home temperature at any time or automate temperature control based on whether you’re home or away.

Remote control of your locks

Grant temporary access to your home or confirm lock status from anywhere with a view of your smart locks right from your mobile device.

Modern, smart control

Control your smart devices from Alula’s mobile app and from 7” dedicated touchscreens located throughout your home. The controls are the same on both making device operation consistent and convenient.

Contact your Alula dealer to add connected devices to your system and to set up automated scenes that add convenience to your life.
