

Sensors

Protect what matters most

An Alula Smart Security System helps you feel safe in the place you spend the most time - your home. Know whenever a door opens or closes. Keep tabs on water leaks. Reduce worry about fires and carbon monoxide leaks with sensors that feature audible alarms and send you mobile notifications. Outdoor sensors monitor the perimeter of your home and notify you of potential intruders before they ever make it inside.

Sleep easy with the peace of mind that comes from knowing you've got a net of protection in and around your entire home.

In the know

Always know when a door or window opens or closes, if a window breaks or when motion is detected.

Perimeter protection

Exterior sensors provide notifications whenever someone enters the premises or the pool gate is opened.

Keep tabs on water leaks

Receive a notification whenever the water heater or dishwasher leaks or the basement sink drips in places it shouldn't.

Life safety sensors

Bring smoke and CO into the open with alerts and notifications whenever either is detected.

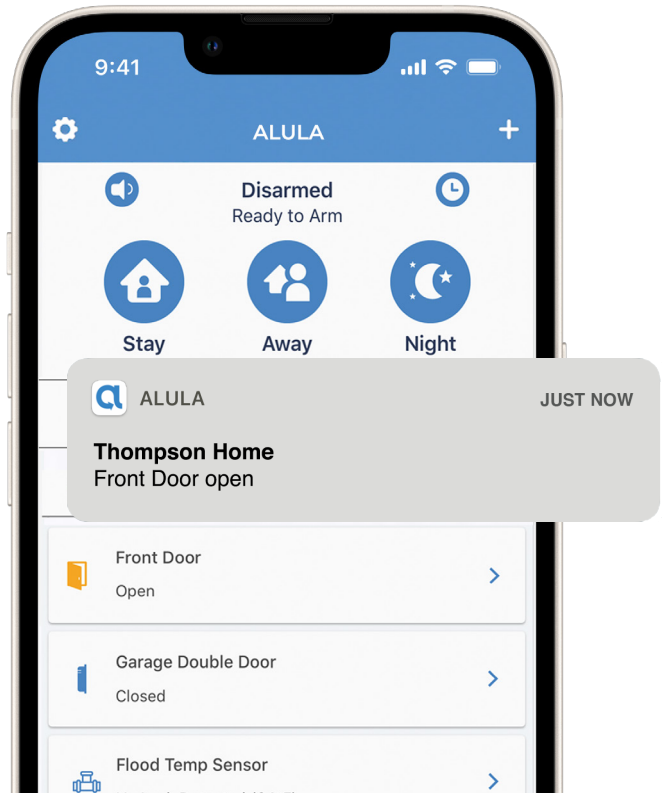

Modern, smart control

Control your system from Alula's mobile app and from 7" dedicated touchscreens. The controls are the same on both making system operation consistent and convenient.

Backed by professionals

Seconds matter, that's why nothing beats the peace of mind in knowing that professionals are monitoring your property 24/7. Rest assured that the moment a security event is detected, advisors will be notified and action taken immediately.
