

thermostat

Smart energy savings you can feel

An Alula Security System gives you the ability to integrate your smart thermostat into your system and control it from anywhere. Turn on or off the furnace, adjust the temperature, or dial-back the fan speed right from your phone. You can also reduce energy consumption by automating the temperature based on whether you're home or away which can result in real energy savings that add up.

Keep tabs on your home's climate and rest comfortably whether home or away with a Z-Wave thermostat and Alula Smart Security System.

Lightning fast

Unlike other systems, you don't have to wait for your temperature adjustment to be confirmed by your system. Our ultrafast, encrypted network makes changes instantaneously.

Automated for your life

Create schedules to turn down the temperature when you leave and pump up it up before you arrive home - all without lifting a finger.

Smart control

Power on or turn off the system from your mobile device while at home or on the go.

Fast, easy adjustments

Air blowing too fast? Furnace too loud for your video call? Easily adjust the fan speed right from the Alula Security app.

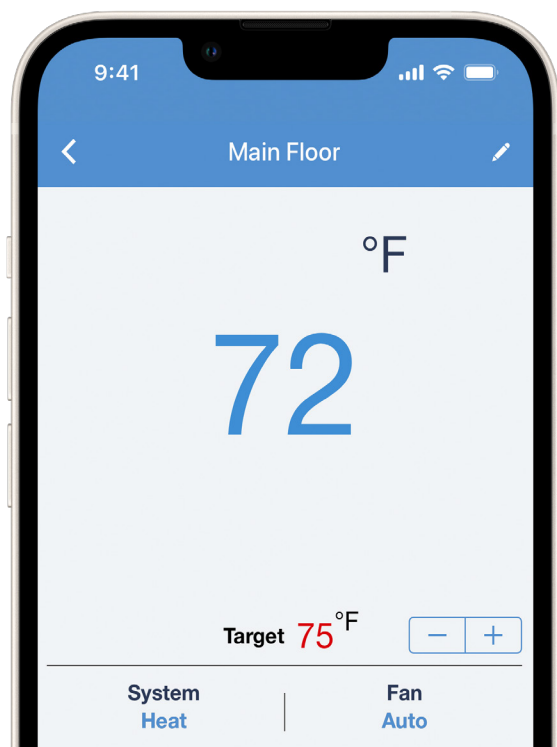

Contact your Alula dealer to add a connected, smart thermostat to your system.

Energy savings

Studies have shown that smart thermostats can save on monthly energy consumption.

Modern, smart control

Control your thermostat from Alula's mobile app or from 7" dedicated touchscreens located throughout your home. The controls are the same on both making thermostat control consistent and convenient.
