Smart control for your busy life

The 7" Touchscreen is the central hub for keeping tabs on everything that happens with your Alula Security System. View live and recorded video and interact with visitors at the front door. Turn on or off smart lights and control all your Z-Wave smart devices. Be alerted whenever a door opens or closes and continuously monitor for things like carbon monoxide leaks and intruders. Trigger automated scenes at the press of a button that do multiple things instantaneously like arm the alarm system and turn off hallway lights.

With controls that are the same as your mobile app, you can rest assured that using your Touchpad will provide ease and convenience to your hectic schedule.

Live view

Want to answer the door from the kitchen table? See and speak with visitors with a live stream from your doorbell camera.

Smart device control

Turn up the thermostat, unlock the front door, or turn off the living room lights from dedicated touchscreens located throughout your home, manually or with automated scenes.

In the know

Receive a notification whenever a door or window opens or closes, when glass breaks or when motion is detected - both inside and out.

Your home, your way

Completely customize the home screen for quick, at-a-glance access to what's most important to you.

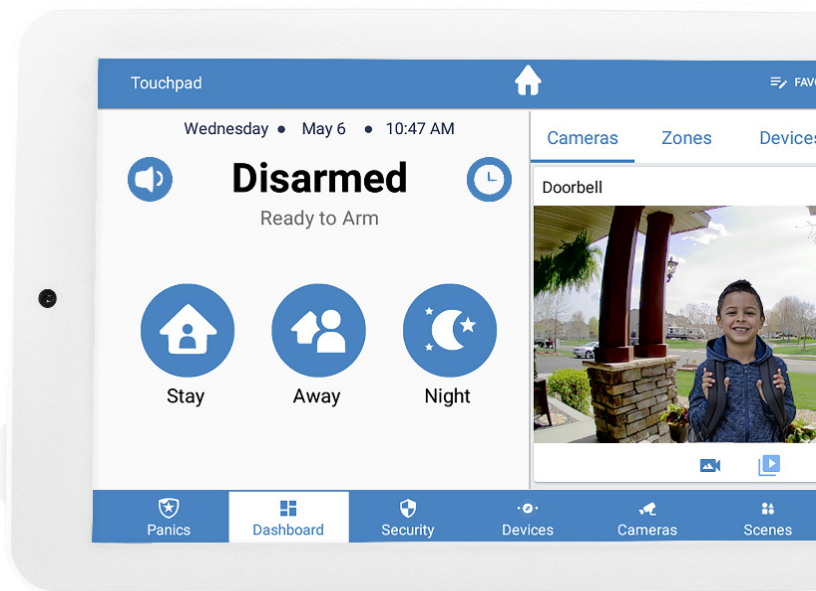

Contact your Alula dealer to add the award-winning Connect Touchpad to your system today.

Easy, unified control

No need to learn a new interface. System controls from your touchpad are the same as the Alula Security App making it easy to learn and use.

Lightning fast

Unlike other systems, don't waste valuable time waiting for confirmation of your action. Know instantly that your light turned on or the door locked with our ultrafast, encrypted network.
